### ADVANCED CONTROL PANEL

(20) /M/B/E/C £30 ex VAT £34.50 inc VAT

ACP is a front end control panel language providing a sophisticated yet friendly interface between user and computer for access to Languages, MOS functions and the users own file utility etc. Main features include pull down windows, simple to change MOS configure, floating point calculator, file manager, SW ROM's facilities (16K EPROM & FULL MANUAL)

"its very easy to create an entire customised front end for your own use." - *Acorn User, August 1987.*

"ACP is much better than any of the other front end systems I've seen." - *Acorn User, August 1987*

"I can recommend it to anyone who wants easy access to the Electron's functions." - *Electron User, August 1987.*

ACPs main features are:-

- \* Pull down windows operate throughout
- \* Floating point calculator
- \* Users can create their own windows
- \* File manager
- \* Simple to change MOS-s configure options
- \* Floating point calculator
- \* Easy entry to other languages

### ADVANCED DISC TOOLKIT

(01) /M/B/E/C £30 ex VAT £34.50 inc VAT

Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd & co-processors A.C.P.'s BEST SELLING product containing over 30 commands inc:- powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMs, load/run programs below page, automatic menu, file transfer (inc. locked cassette files), ADFS utils etc, etc ("it's superb", ... Database Pubs. - "A top-class toolkit - I have no hesitation in recommending it. . . Acorn User Nov. 86) (16K EPROM & FULL MANUAL)

### ADVANCED ELECTRON DFS E88

(14) /E+ASR/ £17.38 ex VAT £19.99 inc VAT

An alternative to the DFS on rom for Plus 3 and ABR users. This optional alternative DFS is designed for use in Side-ways RAM (ABR) and allows the user to operate a disc filing system & E88 when using the Plus 3 (in ADFS page would normally be &1D88). The DFS is simply loaded using the software supplied with the ABR from disc. (3.5" ADFS disc + manual)

### ADVANCED ELECTRON DFS

(05) /E/ £21.00 ex VAT £24.15 inc VAT

Electron & Plus 3 users. . . gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+. Now you can produce and access (compatible) BBC disc based software. We can also supply 5.25" disc drives to add to your Plus 3 (inc. 2nd. drive adapter). "ACP has produced another superb ROM for the Electron". . . Electron User Feb '86 (supplied on 16K EPROM + DFS MANUAL)

### ADVANCED DISC INVESTIGATOR

(06) /M/B/E/C £25 ex VAT £28.75 inc VAT

A very powerful Disc utility for standard & non-standard discs. Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40 track discs to 80 track discs, verify two non-standard discs.

("ADI features an extremely comprehensive sector editor, and one of the finest I've seen". . . Tubelink on Prestel)

(supplied on 16K EPROM + manual)

### ADVANCED 1770 DFS

3 versions ADM/C(11) - ADB(12) ADE (13)  
£30.00 ex VAT £34.50 inc VAT

ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is a very fast and powerful disc filing system with the ability to operate in double density occupying both sides of a disc (640K). Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC.

(16K EPROM + comprehensive manual)

## PRES POLICY

1. To provide the best possible service & assistance to users.
2. Supply Acorn based or Acorn compatible products & to enable upward compatibility wherever possible.
3. Provide tested products with special attention to quality of design, components & production.
4. \*\*Only to cash cheques & credit card receipts when we know we can supply the goods ordered.\*\*

## THE ADVANCED PLUS 3 MK II

The only fully compatible disc upgrade running Acorn's own filing system.

**COMPLETE PACKAGE ONLY**  
£129 excl VAT; £148.35 inc VAT

## ADVANCED PLUS 5

A unique interface for those wanting the maximum expansion from just one slot in the PLUS 1.  
£58.00 Ex VAT; £68.24 inc VAT

**ADVANCED PLUS 1** ... The plus 1 is the main expansion for the Electron as designed and originally produced by Acorn.

The only currently advertised addition to the Electron that is a fully compatible cased unit that we can recommend for future upgrades i.e. Disc upgrades such as AP3/AP4.

£50.00 excl VAT; £57.50 inc VAT

**ADVANCED PLUS 6** ... a fully buffered 6 ROM expansion module for the Electron user.

£33.00 excl VAT; £37.95 inc VAT

**UPGRADE SERVICE** for the original Acorn Plus 1 to Advanced Plus 1 and AP6.  
£40.00 excl VAT; £46.00 inc VAT

## ADVANCED ROM ADAPTER 2

An Acorn approved cartridge containing a card with special 'zero' profile sockets.

£13.00 excl VAT; £14.95 inc VAT

## ADVANCED BATTERY-BACKED RAM

A standard Acorn approved cartridge but containing 32k (2 x 16k) of sideways RAM, inc. Software Protect Facility.

£39.00 excl VAT; £44.85 incl VAT

## DISC INTERFACES

(Plus One required)

**AP3 INTERFACE:** As supplied with AP3 package.  
Price £52.00 ex VAT £59.80 inc VAT

**AP4 INTERFACE:** A fully Acorn compatible disc interface.

Price £60.83 ex VAT £69.95 inc VAT

**AP34 INTERFACE:** Get the best of both filing systems.

Price £69.55 ex VAT £79.98 inc VAT

## ADVANCED PLUS 2 ROM

We feel this is one of the best, low cost, additions we have produced for the Electron & +1 user, especially for Plus 3, AP3 & ABR users.

£11.00 ex VAT; £12.65 inc VAT

## ADVANCED PLUS 7

An internal battery-backed RAM upgrade for the Advanced Plus 6.

£39.50 ex VAT; £45.42 inc VAT

## \*\* USER PORT \*\*

A low cost unit for those who just require a user port interface.

£19.99 ex VAT; £22.95 inc VAT

## ADFS VERSION 1.1

Suitable for existing Plus 3 or A.P.4 users.

£14.95 ex VAT; £17.19 inc VAT

## ADFS E00

For Electron users with either Plus 3 or A.P.4 and 32k of S/W RAM i.e. ABR.

£14.95 ex VAT; £17.19 inc VAT

5.25" ADFS (manual avail. sep.) £14.00 ex VAT; £16.10 inc VAT

5.25" DFS (2 discs+ADFS manual) £19.00 ex VAT; £21.85 inc VAT

## AP4 MOD

This converts an AP3 to an AP34 (ie. DFSE00) supplied as a two chip set, full documentation and fitting instructions.

£21.74 ex VAT. £25.00 inc. VAT

**Why are we giving away up to  
24,000 copies of  
FRENCH ON THE RUN  
worth £9.95 for next to nothing  
AND giving away a weekend  
for two in PARIS?**

As part of our market research plans we need to know just how many readers of this magazine will respond to such an incredible offer.

To receive your **French On The Run** cassette, simply fill in the order form below and send it to us, enclosing two £1 coins to cover post, packaging and handling, and we'll mail your tape within 48 hours. You will also be placed on our mailing list, unless you tick the box requesting us not to do so.

**French On The Run** is a superb real-life simulation of an adventure set in wartime France. You're a British pilot shot down over France in 1941. Your task is to return to England without being caught by the German occupying forces.

To achieve this you'll have to overcome numerous obstacles, taking care to establish who is friend and who is foe. To an extent the quality of your French will determine how successful you are but, the more you play, the more your French will improve.

Remember, 1992 is just around the corner so this could be the ideal way to either brush up your French or learn a bit more.

PLUS the first person who completes the game and cracks the coded message will receive a free weekend for two in Paris with all expenses paid, worth a total of £300! So don't delay, send for your tape today!

**AND YOU DON'T EVEN NEED A STAMP!**

Please note: This offer is valid only until March 31st 1990

PLEASE WRITE CLEARLY AND IN BLOCK CAPITALS

I claim my **French On The Run** cassette and enclose two £1 coins to cover post, packaging and handling.

## Cover Story

### 23 Discs

Everything you ever wanted to know about discs and disc drives, but were a little reluctant to ask.

### 6 News

All the latest developments in the world of the Electron. Plus the latest Gallup chart.

### 8 Pendragon

Another bundle of hints, tips, maps and solutions from our resident arch exponent of adventure wizardry.

### 11 Arcade Corner

Stuck at the start of Ricochet? These solutions to the first two levels are sure to get you going.

### 13 Software

Fab Four - a top-notch compilation - and that superb arcade adventure Last Ninja 2 come under our reviewers' spotlight.

### 16 Life

Play the generation game in this super-fast, modern computerised version of the classic simulation of multi-cellular society.

### 19 Remsave

Cut down on typing with this handy utility which automatically saves files with the right name.

### 22 Time Warp

Barry Woods takes a trip back to the very first stand-alone issue of Electron User.

### 29 Fireworks

Just enter a few simple parameters to create your own animated firework display with this fascinating graphic utility.

### 30 Memory Master

Find out what has happened to your micro's memory with this utility to display Basic's system variables.

### 32 10 Liners

More mini-programming marvels from our talented readers - it's amazing what can be crammed into so little space.

### 37 Deflector

Be warned: You'll soon be tearing your hair out when you play this frustrating, yet simple, ball game.

### 38 Plotter

Puzzled by facts and figures? Then turn them into pictures by drawing line graphs, bar and pie charts in 2D or full colour 3D.

### 41 Micro Messages

A selection of the many interesting and lively letters you have been sending to Electron User over the past few weeks.

## Back to school

10 educational games for  
the Electron for just  
**£5.95**

Order on Page 45

SUPERIOR Software boss Steve Hanson has made 1990 a year of promise for Electron owners.

"A long time ago we took the decision to go into BBC/Electron software and we see no reason to go back on it", he told *Electron User*. "There is still a strong market out there and we will continue to serve it".

Backing up this vote of confidence, Steve has already launched into the new year with a vengeance.

Sam is back again with version 12 of the Play It Again series from Superior (0652 58585). *Electron User* gave readers of hint of the latest Sam in the December issue and can now reveal the final line-up.

Sam 12 includes an updated version of the evergreen 20 level alligator-type game Bagger. Improvements include sound on/off and the ability to stay on the same level when all lives are lost.

Skirmish is second in line. It's the classic jousting game from programmer Delos D. Harriman. Top selling BBC/Electron game of 1989 The Last Ninja is number

## It's a promising year for Electron owners

Screen shots from Bagger...

three and completing the line-up is boxing simulation By Fair Means or Foul. Usual Sam prices of £9.95 for cassette and £11.95 for disc.

Early in February look out for a brand new Electron game from Superior. Called Perplexity, it's a cross between Repton and Pacman. The basic Pacman formula is combined with strategy and problem solving, moving through 16 levels with four different backgrounds. The 3D levels get increasingly harder so

watch out for the final ones. Price £9.95.

Electron owners who have longed for their own version of last year's eight bit hit Robo Cop could soon have it. As *Electron User* went to press, Steve was in discussions with huge games house Ocean for the rights to produce a BBC/Electron version of this favourite.

When it comes it may be a bit more expensive than the usual Superior price but well worth the extra. Watch this space.

...and Skirmish

## More disc games are on the way

THERE was a time when Electron games on disc were few and far between but this is no longer the case, thanks to John Huddleston of Pres (0276 72046).

Pres has secured the licence to reproduce 50 Superior titles on disc and this operation is now well under way.

First offering, out just before Christmas, included Arcadians, Meteor, Snooker, Magic Mushrooms, Monsters, Qwak, Video's Revenge and Bug Buster.

This was due to be followed by the next disc containing Starship Command, Maze, Killer Gorilla II, Frak, Cosmic Camouflage, Constellation. Prices: 3.5in AD FS £11.

## Highway patrol

TYNESOFT'S New Year treat for Electron owners takes them to the rough tough world of California. It's Beverly Hills Cop, the company's popular multi-game Christmas offering on other formats.

Players join Detective Axel Foley on a day's patrol. First duty is to try and prevent all out warfare on the streets by stopping consignments of arms getting to gangland trouble makers.

Variety is the name of this game, with action moving on to a car chase followed by a commando-type game and ending with a maze. Electron cassette costs £9.99.

## Let your micro get a head

**FAITHFUL** Electron owners build up a fondness for their machines which is unusual in the computer world. It's a trait which could make them a prime target for the latest American craze.

Those who remember the fashion for pet rocks should brace themselves for a new wave of trans-Atlantic anthropomorphism. Computer critters have been launched on an unsuspecting market by Celsus Designs Inc.

They provide your machine with stick-on head, arms and legs and are aimed at encouraging children to use computers or at adults with a sense of fun. Computer critters are not yet available in the UK and cost \$40 in the USA.

## Disc labels

WHEN discs are re-used, labels have to be scribbled over or peeled off. To solve this problem, Blackstuff (0737 833015) has produced Pollylabels, erasable labels which come in packs of 50 with marker and eraser pens, cotton wipes, erasing fluid and colour coding stickers for £11.95.

# Gallup Software Chart

THIS MONTH	LAST MONTH	TITLE (Software House)	COMMENTS	PRICE
1	1	<b>PAPERBOY</b> <i>Encore</i>	Back in the charts with a vengeance after a long absence. It's a pity about the flicker and slow speed – get a Turbo.	2.99
2	2	<b>PLAY IT AGAIN SAM 10</b> <i>Superior</i>	An excellent arcade compilation presenting you with the golden oldies of Zalaga, 3D Dotty, Repton thru Time and debuting Qwak.	9.95
3	5	<b>STRIKE FORCE HARRIER</b> <i>Alternative</i>	Now available on a budget label, you can take off with this excellent Mirrorsoft flight simulator at a bargain price.	2.99
4	•	<b>YIE AR KUNG FU</b> <i>Hit Squad</i>	There have been many clones and any combat game is invariably compared to it. A nice trip into meaningless violence if you like that sort of thing.	2.99
5	•	<b>MINI OFFICE</b> <i>Alternative</i>	Now available at a budget price, this integrated package is a good introduction to more serious applications.	1.99
6	6	<b>PLAY IT AGAIN SAM 9</b> <i>Superior</i>	Not seen before is Camelot, whereas you can renew your acquaintance with Spycat, Steve Davis and Repton. One of the better Sam compilations.	9.95
7	•	<b>INDOOR SOCCER</b> <i>Alternative</i>	If you are tired of the outdoor variety it is probably time to go inside. Not the best football implementation, but OK for a wet Sunday afternoon.	1.99
8	•	<b>PALACE OF MAGIC</b> <i>Superior</i>	Enter the palace of puzzles and foes and enjoy this arcade adventure. You could buy it on Sam 3 for the same price if you wanted.	9.95
9	•	<b>STRYKER'S RUN</b> <i>Blue Ribbon</i>	First in the next generation of Superior/CDS re-releases. One you really must have in your collection if you missed it first time out.	2.99
10	10	<b>JOE BLADE</b> <i>Players</i>	The original romp for community-conscious Joe. With a third mission about to hit the streets, buy this while you still can.	1.99
11	3	<b>SUPERIOR SOCCER</b> <i>Superior</i>	By combining the arcade and the management routines into one composite program the punter has the best of both worlds.	9.95
12	4	<b>CHUCKIE EGG</b> <i>A&amp;F</i>	Yes he's back again, and this really is an oldie now. One of the first games available, you won't have egg on your face if you buy it.	9.95
13	15	<b>SNAPPER</b> <i>Acornsoft</i>	If you search hard enough you can still find this full-priced version, though it's better value as part of the Sam 7 compilation.	9.95
14	•	<b>COMMANDO</b> <i>Elite</i>	A Rambo-style shoot-'em-up against the odds. Now on a budget label, but you can also buy this as part of the Play it Again Sam 3 compilation.	2.99
15	13	<b>SUBWAY VIGILANTE</b> <i>Players</i>	Your angelic presence must strike to make the underground safe for trams. A hack and slash martial arts game with little out of the ordinary to offer.	2.99
16	•	<b>FRUIT MACHINE</b> <i>DK Tronics</i>	A cheap way to beat the odds. Can you get a set of apples, pears or bars? But lacks the thrill of real pocket being at stake.	9.95
17	7	<b>LAST OF THE FREE</b> <i>Audiogenic</i>	Still selling well even without a budget label. You may have to search hard to buy it now, but it's well worth the trouble.	7.95
18	•	<b>JOE BLADE 2</b> <i>Players</i>	The graphics are good and the game very playable. The puzzle screens are wicked and will keep scratching your head for hours.	2.99
19	12	<b>PLAY IT AGAIN SAM 8</b> <i>Superior</i>	The third compilation this month, with Winter Olympiad, Quest, Around the World in 40 Screens and Mr Wiz taking starring roles.	9.95
20	•	<b>SOCCER BOSS</b> <i>Alternative</i>	Back again. Not a very new title but try it if you fancy your chances for soccer boss stardom. At this price you have little to lose.	1.99

**T**HE year moves on and the first signs of spring are beginning to appear as bright orange and violet crocuses poke their heads through the white blanket of snow. Not that either I nor any of my knights will be poking our heads out into the snow – well not quite yet.

We are now all in our third month of hibernation, huddled around fires and purring Electrons, struggling ever onwards to solve those mysteries of silicon fantasy. I can at last sense the end of Gateway to Karos and hopefully with a bit of perseverance will finish it this week. To celebrate I will now offer some more tips to supplement those given last month:

To stop the Kobolds from stealing your lamp, pull the lever on the copper tube as soon as they appear. Throw the metal sphere to get past the griffin. Blow the horn loudly to get past the serpent. If you are having problems getting the treasure out of the dragon's cave, give him the berries to eat, and wear the cap of invisibility and the gloves.

Rub the crystal to obtain the combination to get beyond Khoronz's laboratory. The Gateway itself is a strange object to master as it can only be approached from the West side. It is best to explore for yourself and work how best you can enter it from that direction.

I am making equally good progress with Level 9's Red Moon and also hope to finish the Price of Magik. Hints to both adventures will be posted here in due course.

Meanwhile, Quondam is still baffling me, and the prize of a copy of the original Magus game, Village of Lost Souls, still awaits the sender of the first full solution I receive to

# Adventures

By Pendragon

## Onwards, ever onwards

this classic Acornsoft adventure.

I also have a brand new disc copy of Avon and Mordac to give away to the sender of the first solution or set of maps I receive to Topologika's other teasers, the recreated Philosopher's Quest and Countdown to Doom. But note, that it is solutions to the Topologika updates I need, not the original Acornsoft versions of these games.

I was pleased earlier in the month to

receive a letter from long-time contributor Barbara Gibb, who offers help with most standard and expanded Electron adventures – her list is far too lengthy to print.

She would be delighted to hear from any reader who is having difficulties in particular games, but rightly insists that if you want a reply you must include a stamped self-addressed envelope – and please don't ask for full solutions. Reach her at 52 Burford Road, Liverpool L16 6AQ.

I also received a letter from Jonathan Forster, of Tiger Soft, to say that the company's first Electron adventure, The Magic of Merlin, is now due for release. This 300 location jaunt is available on cassette and is priced at £7.99. I await a review copy of this long promised game with great interest.

A series of intriguing cheats and pokes found their way on to my desk this month. The adventurer responsible was none other than Geoff Livesey, who has passed on many such routines in the past.

For those of you who may stoop to such underhand methods, these snippets might be of interest: To list the innards of Sphinx Adventure type:

```
"
?85774=8FF
*FX200,0
LIST
```

and hey presto, all will be revealed. To do the same with Philosophers Quest press Break followed by:

```
FOR IX=1 TO 302:PROC(X):NEXT
```

Or with Classic Adventure, follow Break with:

```
FOR IX=1 TO 140:??80D=IX:CALL 815
98:PRINT:G=GET:NEXT
```

Finally, this month's featured map is of the openings to Kansas City's Ring of Time. This

## Readers' Hall of Fame

### Acheton Bob Purder

After dropping the fleece, turban, spice and horn you must continue in your quest South East, Down, East and drop the clock. Now return to the slab – open the door and go South, East, East and East.

Drop the keys, take the gin, thread and marble and go to the cliff as before. Drop the lamp and drop the gin.

Turn the lamp off, fill your bottle, go to the pyramid, drop the bottle and eat the cactus. Now go Down, follow the Balrog – but be careful – and TAKE SCARAB and TAKE QYWINROL.

Go Down again, take the helmet, go to the Gate of Isis, take the coral and venture through the gate. Now follow Yelka and take the torque.

Go to the Snake Maze, take the bracelet and the carbuncle. Sacrifice the scarab, torque, coral, bracelet, carbuncle, palantir and the helmet at the second location of the Snake Maze. Then finish the maze, take the silk and candlestick.

Travel back via the mummy to the Isis Gate. Eat the mushroom, go through the gate, take the rope and SAY WORD. Now tie the rope, go Down, visit the Sphinx and drop

the helmet anywhere.

Take six treasures, drop the palantir and visit Star-room 2. DROP ALL, take the lamp and palantir, SAY ZOGE and go West. Return to the slab room, take the plate, mink and gloves.

Go Up, North, North and North to the ice fork, go North twice more, look at the palantir and take the garnet. Go back South and West and take the habergeon. Continue East, East, drop the plate, Down, South-East and take the agate.

Now return North West, Up, North West, South, South East, South, South and Down to the slab room. Turn the lamp off, SAY ZOGE, turn the lamp on again and drop all the treasure which you have just collected – ensuring you drop the habergeon in the slab room.

Go through the toll room, collect the amber, amethyst and chess set, get the cross from the Gallery and get the stake from DEroom 3. Go to Star-room 5, SAY ZOGE and drop the amber, amethyst, chess set, cross and stake.

Enter the Timeless Cavern, go down the slope and into the mine. Collect the opals, amulet, brooch, jade, lead and quartz, and take the sword from DEroom 5.

(Continued next month)

# Opening Gambit Map No. 13

## RING OF TIME

was one of the first adventures I ever played, and it brings a certain warmth to my bones to display this map for you – I remember how hard I sweated to originally draw it

up. Next month I continue this popular series with a guide to the openings to Melbourne House's Classic Adventure.

● That's it for this month, so until the clock of ages stops, happy adventuring

## Problem solved

### The Axe of Kolt Harry Bastien

The entry code for part two of this adventure is CLTH LGCH. Upon entering part two, go South, West, West, South-West, South, West and knock on the door. Continue East, North and West.

Now LOOK HEDGE twice, ENTER HEDGE, GET SPEAR, GO HEDGE, travel East and North and examine the bush. Throw the spear, go North, get the spear, examine the bush, then get the bow and arrow. Journey South, South, West, North West, North East, North East and East to the spider.

At this point BRUSH SPIDER, examine it, then go East, East and In. Examine the table, remove the drawer, examine it, TURN DRAWER, get the paper, examine it and leave the room.

Go South and examine the flowers and get the seeds. Now continue North, West,

South and examine the pine tree. Break a branch and examine the pine, then travel South East, South West, South and West, and KNOCK DOOR. When your knock is answered, SAY YES and TALK.

GIVE PAPER – a clue on how to kill Morgeth – and go East, North, West, North West, South, South East and examine the dove. Throw the seeds and get the cotton before continuing North West, North, North East, North East, East, East and North.

Look East, shoot the partridge, go East and get the partridge. Now journey West, South, West, South, South East, South West, South, West and knock on the door. Examine the bag and go East, North, West, North West, North East and South West to the boar.

Throw the spear, get it, go South-West and examine the river. Next you must empty the bag and cross the river. Now for a tricky bit: Go North, DUCK, JUMP, throw the spear

and get it – in that order.

Go North West, North and West to the bush. Examine the bush, break a thorn and return East, South, South East and South to the river. Cross the river, go North East, North East, East, East and South. Now dip the thorn and attach the cotton.

Once again go North and West to the spider and dip the dart in the poison. Travel West, South West and South West to the river. Cross the river, examine the spear, untie it and insert the dart. Continue South West and examine the vegetation. Crawl into the tunnel, crawl West and look North towards Morgeth.

Blow the dart at Morgeth, crawl East, crawl East, then go North East, West, West, West, examine Morgeth and get the talisman. You are now given the code for part three of this adventure, which is: ASIL ANOM.

# Get on the ball

**M**OST of this month's Arcade Corner is devoted to solutions to two levels of Superior Software's superb arcade adventure *Richochet*. Both solutions are provided by David McMinn of Inverurie, Scotland. But first, here are two quick cheat modes for *Predator* and *Impact*:

Play the part of Schwarzenegger in the computer game of the film of the same name

*Richochet* is a superb multi-screen arcade adventure

## *Predator* – Superior Software

Jamie Dutton of Leytonstone, London, says that if you are having problems with this game, when you reach the second level make sure that you have a few bullets left over from level one. Just before you reach the alien, drop your gun and pick it up again. Your ammunition will magically be topped up.

## *Impact* – ASL

James Treadwell of Southport, Lancashire has discovered a cheat mode for this fine variation on that old favourite, *Breakout*. When on the high score table press Escape, Caps Lk, Control and Shift simultaneously. Now during a game you can press G to advance the weapons indicator and J to jump to the next level.

## *Richochet* – Superior Software

### First level

Get key B then key A and open gate B. Open

gate A and get key E. Open gate E. Get the note and key C then open gate C. Get the tomato and go to the start and drop the note. Go one screen to the right and drop the tomato. Get keys D and G and use them to open the corresponding gates.

Get the hourglass, pick up the note and powerdrill. Go to Hole-in-Wall and walk through it. Walk into the basket – it will turn into a snake. Go back and get the tomato then walk into the snake.

Go on to the next screen and climb up the chain and over the top. Stand by the pillar and jump up.

Press the \* key when you are level with the red square. Keep on trying if you don't pick it up first time.

Walk into WM (white man) and you will get a bag of money, then walk into the robber.

Get key F and the empty bottle. Walk into WM and the bottle will be filled. Open gate F then walk into the cross and you will be given a ghost. Walk into WM and you will get a bunsen burner. Walk into the newspaper and you will receive a flame.

Get the hourglass then go to the screen where you picked up the red square and go down the shaft.

At the bottom there is a secret passage – go down it. You'll find some water down there somewhere – walk into it. Now travel right for a few screens and stand on the strange shape.

### Techlev

First collect key C then get the round object. Open gate C then go to the dosh machine and collect the dosh. Get key E then walk into the tax demand. Get key D then open gates E and D. Take the stamp and walk into the letter. Pick up the disc then walk into the postbox and computer. Get NA and C1 and you will get salt.

Take key F then walk into the slug. Open gate F, take the hourglass and key B. Open gate B then stand on the transporter.

Don't miss out on the mass of material that's appeared in *Electron User* over the past few months. Bring yourself up to date with this back issue bundle, packed with games, utilities, features and programming tutorials.

*Here's what you'll find in the August 1989 – January 1990 bundle:*

**August 1989 issue:**

*Games:* Rollerball, Bingo. *Reviews:* Alps, Turtle Worlds, White Magic, Play it Again Sam 9. *Features:* Map of Kayleth, Repton Infinity tips. *Utilities:* Disc Housekeeper, Mode 2 screen compacter, Titration, Chemical Equations.

**September 1989 issue:**

*Game:* Snakes. *Reviews:* Keyword, Basic Editor Plus, Ballistix, Sam 10. *Features:* Arcade Corner, Electron history. *Utilities:* Attribute editor, magazine database.

**October 1989 issue:**

*Game:* Spinning frustration, Jet Bike, Robokill. *Reviews:* Rodeo Games, Hi Q Quiz, Spooksville, Rombard. *Features:* Exile solution, Electron carrying case. *Utilities:* Elkpaint, Disc Menu.

**November 1989 issue:**

*Game:* Storker's Run, Shopping Spree, Dollar Dash, Octavia. *Reviews:* Arcade Soccer, White Magic 2, Citizen printer. *Features:* Exile solution, Flowcharts, buyer's guide to printers. *Utilities:* Scroller.

**December 1989 issue:**

*Games:* Wishing Wells. *Reviews:* Ricochet, Play It Again Sam II, System 80, Superior Soccer, Sign Writer, Time Lines. *Features:* Ravenskull solution, American Suds map, Break key protector. *Utilities:* Word square solver, screen faser, calendar maker, extended renumber.

**January 1990 issue:**

*Games:* Bounce. *Reviews:* Subway Vigilante, Blast, Tomcat, AC Datalink. *Features:* Elite playing guide, Time Warp 1985, adventure tips. *Utilities:* Disc/Taper Index, Sunburst, Pie Chart, graphics compiler, DFS and ADFS disc editors.

## BACK ISSUE BUNDLE

**Everything you  
ever wanted to  
know about your  
Electron but were  
afraid to ask is in  
these back  
issues of  
Electron  
User**

Only £1.50  
each or  
**£7.99**  
for all six

**TO ORDER PLEASE USE THE FORM ON PAGE 45**

# Chop-'em-up

Product: Last Ninja 2

Price: £9.95 (tape)

Supplier: Superior Software, P.O. Box 6, Brigg,  
S. Humberside DN20 9NH.

Tel: 0625 58585

HAVING finally wiped out the evil that destroyed your relatives and friends you – as the Last Ninja – take a boat to the USA and end up in the Big Apple itself. But here you discover the ultimate evil: Kunitoki.

So, always ready to fight for the good, you don your black Ninja robes to take on the rotting horrors of New York.

You begin standing on a rooftop near Central Park. Going inside you find a thug – who you can easily dispose of – and by being fairly aggressive at the wall you can open a trapdoor and – dropping down into the next room – you find a key.

Going outside you find a rather belligerent policeman – who clearly doesn't think anyone should walk around in broad daylight wearing black robes.

Scattered about are various items to collect and a number of Kunitoki's henchmen – it's best to match them weapon for weapon if you can. The final escape from Central Park involves leaping across a lethal pond, first avoiding a swarm of bees.

You come out on to the street, where more of Kunitoki's hired villains will try to do you in and in an effort to avoid them you take to the sewers where it's very easy to get lost.

Unfortunately there's a lot more hoodlums down here and a crocodile that needs an explosive send off.

From there you make it into the lower levels and Kunitoki's drugs factory with more thugs and plenty of climbing and jumping to do. The exit is guarded by another animal which seems to be in desperate need of food. Standing on lines around here can be lethal.

The next level takes place in some offices where you need to fight your way through even more thugs and villains, across the outside of the building and finally to the roof where a helicopter whisks you to the final level within Kunitoki's castle.

Unlike earlier levels, on the final one any baddies you dispose of are reincarnated each time you re-enter a screen.

The game has been brilliantly executed by that master programmer Peter Scott. The playing keys are carried forward from The Last Ninja as is the

overall diagonal movement. Animation is excellent and there's lots of detailed scenery. The puzzles are quite fiendish – and hitting the wall is often beneficial.

It's nice to see that Superior can still come up with high quality, original games.

Steve Turnbull

Overall.....	9

## Second Opinion

Last Ninja was a hit when it was first released and this sequel is set to enjoy the same success as the original. The gameplay is similar as is the graphics style, however, the new puzzles and adversaries add new interest to a familiar game. Recommended.

Roland Waddilove

Product: *Fab Four Volume One*  
Price: £9.95  
Supplier: Audiogenic, Winchester House,  
Canning Road, Harrow HA3 7SJ.  
Tel: 01-861 1166

THE packaging for this latest ASL release depicts a Sixties-style record player and a title reminiscent of a certain Radio One Sunday evening programme. Is the *Fab Four* a new game based on those likely lads from Liverpool – Paul, John, George and Ringo? No, it is a compilation of two golden oldies and two spruced up Audiogenic games.

The instructions on the inlay are sufficient to tell you how to find your way around the games, though they could have been better set out.

*Psycastria 2* is, unsurprisingly, the sequel to the original, which was highly rated when first released three or four years ago. For me though, this is the first time I have played it. Controlling a small spaceship aboard a massive spacecraft populated by 10 circular energy pods which whizz madly along, it's your mission to destroy each pod before it shoots you.

The ship scrolls horizontally at Ayrton Senna hyperspeed as you try to shoot various bases on the ship. Though sometimes you can zoom along so fast that you crash into a tall building before you know what's hit you.

Between each level there is a bonus section where you have to destroy aliens flying across the screen. Unfortunately, I have yet to see what happens then, as I still haven't quite got the knack.

The graphics are clear, colourful and well-detailed and the scrolling flicker-free. Good sound incorporates a lively tune accompanying the high-score table, a nice special effect as you prepare to play and a jolly tune as you enter your name.

*Psycastria 2* is difficult but infuriatingly

# Arcade action revisited

addictive as you just have to have another go to achieve a place on the high-score table or see what happens on the next level.

*Thunderstruck 2* is an oldie in which you control an extremely unathletic space-suited person who lumbers his way around

a space complex. All sorts of wicked objects lie in wait to put a stop to your mission which is to find four vital parts of the Deacti-Unit. Of course there are many puzzles to be solved on the way, almost all of which involve locked doors and communicating with robots.

The graphics are fairly good with cute but

*Omega Orb* is another Peter Scott oldie...

deadly characters moving horizontally or vertically while you jump around the various ledges on the screen. The graphics bear a more than passing resemblance to *SpyCat* from Superior. The sound consists of a series of bleeps and a simple end of game tune.

*Thunderstruck 2* is a fairly average arcade adventure which doesn't stand out from the crowd, but it kept me glued to my micro for several hours. The puzzles start off easy and become progressively more difficult.

*Sphere of Destiny 2* takes over where the original game left off. Once again you control a small spherical droid called Bruce who has unwisely taken up a mission to go through 64 space highways, all of which are constructed from small tiles, set out on five different rows.

Each tile has its own colour which indicates how Bruce will react to it. A yellow or blue tile will have no effect while red will slow him down, green does the opposite and purple makes him jump, cyan reverses the controls, white gives a special bonus, but black holes bring the time limit much closer.

*Sphere of Destiny 2* is initially interesting, but as the levels increment, they don't seem to become any more difficult to complete and become repetitive.

*Omega Orb* is another Peter Scott oldie of 1987 vintage, this time featuring a cute creature which exhibits a beautiful squashy effect when he hits the ground. Moving your Orb around a lunar landscape, through caverns collecting Core Pieces is the basis of the adventure, while evil looking creatures with matching intentions try to hinder your progress.

Large animated sprites, used not only for moving creatures but also for many landscape features, allow you to walk through the scenery. A challenging game, though similar to *Thunderstruck*.

As four-game compilations go this is a

better than average collection, as they all provide a high enjoyment factor. I noticed the cover bears the legend Volume One. Will we be seeing a sequel? I hope so.

Cheetah

Sound.....	9
Graphics.....	8
Playability.....	9
Value for money.....	9
Overall.....	9

## Second Opinion

*The compilations roll on, and for anyone who hasn't seen these games before it represents excellent value for money as it will provide many hours of enjoyment. It's value is diminished with every title you already possess.*

Roland Waddilove

*Thunderstruck 2 is another oldie in which you control a space-suited character*

... featuring large animated sprites and good backgrounds

# Life in the fast lane

**John Geraghty presents  
an updated version of  
a favourite simulation**

**L**IFE is an implementation of that old simulation originally devised by John Conway. The program uses three simple rules to simulate the growth of a colony of cells as it grows and becomes a stable body or completely dies out.

For those unfamiliar with the concept, Life is basically a pattern generation algorithm of extraordinary simplicity and power. The action takes place on a plane divided up into a grid of squares or cells – this Electron version is 40 by 62 cells.

Each cell may be alive or dead initially – you set this up at the start – and each one has eight immediate neighbours. The computer works out the next generation of cells in accordance with the following three simple rules:

- If a given cell has two live neighbours its status will be maintained until the next generation. If alive, it remains alive, and if dead, it remains dead.
- If it has three live neighbours it will be alive in the next generation.
- If it has any other number of live neighbours it will be dead in the next generation.

The variety of patterns that these three rules can create is astonishing. Cells swarm about to form colonies which may become stable or collapse into debris. There are even formations which creep about like amoebas, sending out limbs as they pull themselves along.

To explore the Life universe, type in the program and save it before running it to prevent the possibility of losing your work if you have made a typing error in the assembler section.

When you run it you will automatically enter the editor. Although only 2,480 cells are shown onscreen, the display is toroidal, or wraps around to simulate an infinite plane. Patterns going off one edge of the screen reappear on the opposite edge.

To set a cell, move the cursor with the Z, X, \* and ? keys, plus the Shift key if you want double speed, then press Return. Press Return again to delete the cell. You can set several cells at once by holding down Return plus a direction key.

Pressing C toggles the colour option on and off. If you choose to have colour, the new born cells will be shown in green, the mature cells in white and the dying cells in grey. With no colour both the newborn and mature cells will be shown in white and the dying ones will be omitted.

Pressing S toggles the single stepping on and off. This option pauses the display in between each generation so you can study it. Press the Spacebar for the next generation. Press E to enter and exit the editor, starting and stopping the game of life.

There are many fascinating patterns to be discovered, and to get you going, here are a few groups of cells that do interesting things. If you discover any yourself, why not send them in to Micro Messages and share them with other readers?

# Saving grace

**Give your fingers a rest with Stephen Ramplin's utility - once you've typed it in, of course**

**W**HETHER you are writing your own programs or tapping in a listing from *Electron User*, it is always a good idea to save your work frequently in case of power failure, program crashes and so on.

If you are developing a machine code game or utility it is even more important that you save every time you run and test the program. In an effort to cut down on typing,

and to make program development slightly easier, Acorn introduced a new facility into Basic version IV, supplied with the BBC Master Compact. It allows you to put the filename into a REM statement at the start of a Basic program listing and from then on you can simply type SAVE to save it with that name.

The Electron has only version II of BBC Basic which lacks this facility. However, with Remsave - the short machine code utility presented here - you can upgrade your Basic and add this very useful facility provided you have an ADFS or DFS disc system.

All you have to do is to type in and save the program to disc in the normal way. Then run Remsave to create a small machine code program on disc. ADFS users can put this file, called RS, into the \$LIBRARY directory, then it is instantly available no matter which directory you are currently in.

To install it into memory run either the Basic listing or the machine code file with \*RS. Now it is ready to use. When you are next typing in a program listing start off by putting the filename in a REM statement in the first line like this:

```
10 REM >INVADER
```

When you want to save the program with the name INVADER just type \*RS. The filename must follow the greater-than symbol and obey the normal rules for filenames. The utility generates an error message if it can't find the filename in the first line, or if the name is too long.

The utility works by intercepting the oscli vector to add the command to the ones already built in. When called, it responds by taking the filename from the REM statement and initiating a save routine using osfile.

```

## Try Timothy Grantham's fast logo and turtle graphics interpreter

**L**OGO is a fairly new language, less than 15 years old. It was developed by Seymour Papert, a mathematics professor at the Massachusetts Institute of Technology. He investigated how children learn and how computers could help them. Logo was intended to provide the ideal learning environment.

It has been, and still is, widely used in schools, particularly in primary education where children are taught simple geometry through using a turtle or buggy combined with Logo's simple graphics commands.

Unfortunately, the educational history of Logo's development has had the effect of labelling the language as a child's toy. Most people are aware only of the turtle graphics side of the language, and this tends to strengthen the misapprehension.

It is far from being a toy and is in fact a powerful programming language which has many applications. With the exception of turtle graphics, Logo is far from easy to learn and is probably more difficult to get to grips with than Basic.

To provide a gentle introduction to this fascinating language here is a simple turtle graphics interpreter written in just a few k of Basic. The table below lists the commands the interpreter understands.

To get you started writing Logo programs there is a demonstration built in to the program. Run the program and press function key 1 - Caps Lk/Func+1 - to draw a picture. Here is a short procedure to draw a square:

```
CLEARSCREEN
FORWARD 100
LEFT 90
FORWARD 100
LEFT 90
FORWARD 100
LEFT 90
FORWARD 100
LEFT 90
```

It can be written in a more compact form using the REPEAT command like this:

```
CLEARSCREEN
REPEAT 4 [FD 100 LT 90]
```

Simple, isn't it? Can you draw a triangle instead? Or a star shape? Experiment and have fun.

Abbreviation	Command	Effect
CS	CLEARSCREEN	Clear the screen
CAT	CAT	Catalogue disc or tape
FD	FORWARD num	Move forward
BK	BACK num	Move back
RT	RIGHT num	Turn right
LT	LEFT num	Turn left
OSCLI	OSCLI command	Operating system command
KEY	KEY num,command	Define a function key
HT	HIDETURTLE	Hide the turtle
ST	SHOWTURTLE	Show the turtle
PU	PENUP	Lift the pen up
PD	PENDOWN	Put the pen down
CIRCLE	CIRCLE num	Draw a circle
OVEL	OVEL num,num	Draw an ellipse
SETPC	SETPENCOLOUR num	Set pen colour
NEW	NEW	Insert a new ADFS disc
SAVE	SAVE "string	Save the screen
LOAD	LOAD "string	Load the screen
PRINT	PRINT "string	Print a string
CL	CLEAN	Clear the screen
HOME	HOME	Send the turtle to home position
CT	CLEARTEXT	Clear the text window
REPEAT	REPEAT num	Repeat instructions in [...]

**H**ERE we are in the 1990s, and it's almost the end of the century. Can you remember what you were doing way back in February 1984? Those were the early boom years of home computing, with micros like the Sinclair Spectrum, Commodore Vic 20, Oric, Jupiter Ace, Dragon and, of course, the Electron.

Few micros have lasted, but the Electron is the exception – it is still going almost as strongly as ever, with a thriving userbase and innovative companies like Pres supplying excellent peripherals.

Exactly six years ago this month *Electron User* was launched as a stand-alone magazine. Previously it had been a pull-out section in *The Micro User*, but due to popular demand from its readers it was decided to go it alone.

Way back then, the magazine was squarely aimed at a fairly young readership, with cartoon characters like Electron Eddy and Micro Kid very much in evidence. They soon built up a cult following and it was quite some time before they were dropped in favour of a more serious magazine format.

Other features designed to appeal to the younger reader and novice user were Sounds Exciting, a library of interesting sound effects, and Casting Agency, a library of user defined characters. The idea was that you could incorporate these handy little routines into your own program listings. Both were very popular, and we have reproduced a couple of the best ones here.

The lead news story of the February 1984 issue speculated on a new hardware add-on module from Acorn. It was rumoured to have an analogue to digital interface which could be used for joysticks, a Centronics parallel interface for connecting a printer and two sideways rom sockets.

We now know the expansion module as

#### Sounds Exciting:

##### Phaser fire

# TIME WARR 1984

## Barry Woods time travels back to the Electron's early days

the familiar Plus 1 – and the rumours were correct in every respect.

Software companies were ramping up production of games titles for the new Electron; Acornsoft already had 12 titles on offer and Micro Power had 10. The race to produce the first hardware add-on was won by Solidisk of Southend which demonstrated its GPI general purpose interface at the BBC Micro User Show.

The add-on plugged directly into the back of the Electron and provided sideways rom sockets, a printer port, a user port and Atari type joystick port. Unfortunately, Solidisk didn't have a great deal of success with the Electron and no longer produce peripherals for it.

*Electron User* features included the first part of Pete Bibby's long running Introduction to Programming and Trevor Roberts' article looked at the Electron's keyboard and explained what each key did – how on Earth did he make that topic stretch to two and a half pages?

Lunar Lander, Towers of Hanoi and Rescue the Moon Explorers were three simple type-in games, and there were plenty of short utilities and interesting graphics demonstrations too. No shortage of things to do for idle fingers here.

● Next month it's March and I'll be setting the controls of my time machine for 1985. What chart-topping business program had just been released for the Electron? What was the tremendous news from Acorn? And will Pete Bibby manage to get on to PRINT statements by Part 14 of his Introduction to Programming. Wait and see...

# DISCS

## — Everything you need to know...

I AM frequently asked which is the best disc drive and I always answer that they are all the same so buy the best you can. And while that advice may be a little vague, it's probably the best you'll get.

There are many disc drive manufacturers and even more companies produce "own label" units. To make matters worse the latter are often from different manufacturers at different times.

All drives perform the same task and if one works at all, it works as well as any other — such is the nature of digital electronics.

However, the many individual components can be designed in a number of different ways, so let's have a look inside a disc drive.

The function of a drive is simply to record and retrieve data. To do this the disc has to be made to spin.

The spinning motor can move the disc by belt or direct drive, the former being used on the earlier disc drives.

But today it is possible to make small powerful motors to drive the pulleys directly. This has the advantage of taking up less space and, normally, less current than the older method.

Somewhere on the pulley or motor there is usually a paper disc with two rings of black lines.

These are strobe discs used for setting the

which the motor then winds and unwinds to make the head move, or it can be moved using a rack and pinion mechanism.

Whichever method is employed, the details of the design determine the rate at which the head can be moved reliably and this is known as the stepping rate. The head movement motor receives a pulse to move the head from

**Mike Cook offers  
a guided tour of  
a disc drive's  
inner regions**

one track to another, but when it is first switched on there is no way of telling which track it is resting at.

Therefore there is some sort of detector that signals when the head is at track zero. This is normally a micro-switch tripped by a small lever attached to the head. Alternatively this action may be performed by the lever breaking a light beam.

On an early computer of mine the heads could sometimes be stepped back past the point where the track zero switch was tripped. Consequently the drive would not correctly obey the operating system.

Fortunately I have not heard of this happening on the Electron.

When the head is moved to the correct position it is loaded — that is it is brought into contact with the disc. This is done by an electro-magnet pulling the head towards the drive.

And there is usually a mechanical override that unloads the head whenever the drive button is pressed, although some drives have the head permanently loaded to save time.

The operation of head loading can vary from drive to drive and it is known surprisingly enough, as the head load time.

The start of each revolution of the disc is marked by a pulse given by a magnetic device

# Anatomy of a disc drive

speed of the motors. When the motor is running correctly and you view the rings under a flashing light, the lines appear to "stand still" when one light flashes at 50Hz and the other at 60Hz.

These are the two frequencies used for mains transmission throughout the world and so the source of flashing light can be simply an ordinary fluorescent lamp. There is usually a potentiometer on the logic board for adjusting the speed of the motor.

Once the disc is spinning, the read/write head must be positioned on the correct track.

This is normally done with a stepping motor, but the mechanism for transferring rotary motion to head movement can differ.

Traditionally this is done by having the head attached to a helical screw and as the screw turns the head moves across the disc.

Alternatively the head may be attached to a spring strip

on the drive wheel. The pulses may also be used by diagnostic software to determine the speed of the drive instead of using the stroboscopic method.

A write protect notch on the disc indicates a disc should not be altered. This can be sensed by the drive either using a micro switch or light beam.

The electronics board contains all the components to make the drive function. Drives are always connected to a computer along a bus which means that all connections go to all drives. In order to send information to only a single drive, three wires indicating the selected drive are included in the bus.

And somewhere on the electronics board is a set of links or switches to select just one of these lines.

So there you have it - the disc drive dissected. Have a peek inside yours and see if you can identify its major components.

# DISCS

— Everything  
you need  
to know...

**T**HE Electron's disc drives are generally very reliable, and you are likely to have many years trouble-free computing. However, the Plus 3 was introduced around five years ago, if you were one of the first in the queue to buy one your drive will be around five years old.

Have you noticed a slight, but progressive deterioration in read/write reliability when saving or loading data from disc? It could simply be a build up of dirt on the read/write head, particularly if you operate your micro in a dusty environment. Give your drive's head a spring clean and you'll be operating at 100 per cent reliability again.

However, disc drives are complex mechanisms containing sophisticated electronic and mechanical components which require careful handling. So inexperienced users should consider enlisting professional help.

If you are having problems with a disc or drive the first task should always be to try the drive with several discs to eliminate the possibility of a faulty disc. If they all exhibit the same fault then there must be a problem with the drive itself. Next task is to replace

the drive with one that you know works well. With a single drive system you could swap drives with a friend. It is a fairly straightforward procedure that simply involves unscrewing the micro's case and unplugging the old drive from its connecting cables and plugging the new one in. With a twin drive system you could swap the drives around.

If the micro works properly with the replacement drive the fault definitely lies with the

original unit and not the micro. However, if the fault still exists it lies within the micro.

Having confirmed that the drive is faulty, the next stage involves a software diagnostic test disc. Great care needs to be exercised when handling the drive mechanics. The single most expensive drive component is the read/write head, which is easily damaged. Fortunately, the only time the head needs to be touched is when setting the azimuth – the angle between the head and disc surface.

Special tools are required for this task – an alignment disc and an oscilloscope. The disc contains continuous tones and bursts of tones and with it you can locate track zero, adjust the timing and motor speed, check the head positioning mechanism and check the head azimuth.

Cleaning the read/write head can be carried out without the need to take your Plus 3 or drive apart. There are special head cleaning kits available for just a few pounds which consist of a special 3.5in disc and cleaning fluid.

Remember, that a disc drive with a simple fault may become irreparably damaged in inexperienced hands, so if in doubt, ask an expert to take a look at it.

**Roland Waddilove offers help in locating and solving disc drive problems**

## HAVE YOU EVER WANTED TO TURN YOUR ELECTRON INTO A WORD PROCESSOR?!

▷▷▷▷ ... But feel the Plus 1\* is too expensive? ... ◁◁◁◁  
**WE NOW HAVE THE ANSWER!!**

### Basic ... £29.95

This package includes a complete PCB, 1 cartridge port, VIEW word processing, and VIEWSHEET spreadsheet ROM cartridges. (A printer port is not included)

### Extended ... £36.95

This package includes a complete PCB, 1 cartridge port, centronics parallel printer port, VIEW word processing, and VIEWSHEET spreadsheet ROM cartridges.

### Full ... £39.95

This package includes a complete PCB, 2 cartridge ports, centronics parallel printer port, VIEW word processing, and VIEWSHEET spreadsheet ROM cartridges.

**FRONT**  
(FULL Board shown)

**PLUS** you can buy the **ADVANCED USER GUIDE** with these packs for only **99p**.

**AND** we'll send you a **£25.00** voucher off a **SCHNEIDER PRINTER**

(EG £149.95 with £25.00 off our current offer price of £174.95; printer cable £6.95 and carriage £3.50 extra)

If you would like further details of the expansion boards, **VIEW & VIEWSHEET** or the printer .. please call us!

## fun school 2

RRP £9.95

**OFFER PRICE £7.95**

(Per age range)

### UNDER 8 YEARS Includes:-

- SHAPE SNAP: Colourful shape recognition
- FIND THE MOLL: Experiment with number sizes
- TEDDY COUNT: Ideal introduction to numbers
- WRITE A LETTER: Creative fun at the keyboard
- COLOUR TRAIN: Play at spotting colours
- PICK A LETTER: Word building made easy
- SPELL A WORD: Enjoy naming the pictures
- TEDDY BEARS PICNIC: Move around a maze

### 8 - 9 YEARS Includes:-

- NUMBER TRAIN: Calculations made enjoyable
- SHOPPING: Which shops for which products?
- MATHS MAZE: Fun improving arithmetical skills
- TREASURE HUNT: Introduction to co-ordinates
- BOUNCE: Get to grips with angles
- PACKING: Discover tessellating shapes
- CATERPILLAR: Word building challenge
- NUMBER 1 JUMP: Have fun practising tables

### OVER 9 YEARS Includes:-

- BUILD A BRIDGE: Shape-fitting challenge
- PASSAGE OF GUARDIANS: Enjoy anagrams
- UNICORN: First steps in problem solving
- LOGIC DOORS: Mapping made easy
- SOUVENIRS: An introduction to travel
- CODE BOXES: Discover binary arithmetic
- MYSTERY MACHINE: Have fun breaking codes

# DISCS

— Everything  
you need  
to know...

**Y**OU may have wondered what the difference is between a single and a double sided disc. Well, the fact is that all manufacturers aim to produce double sided, double density discs. It is only after production that their products are tested to see which category they fall into. If they fail the strict double sided test they are classed as single sided.

Obviously double sided discs can be used in either a double or single sided disc drive, but often a single sided disc will work quite

**Should you buy double  
or single sided discs?  
Steve Evans explains  
the difference**

## Double trouble

happily in a double sided one. Most single sided discs can be formatted as double sided.

Business users who need the utmost reliability for data storage should use high quality double sided discs, but home users will probably experience no problems at all using a single sided disc in a double sided drive. You might have to reject one or two but it will still work out cheaper than buying the top whack discs.

Two further categories into which discs are classed are single and double density. The most common density of 3.5in discs is 135tpi — that's tracks per inch, the number of tracks that were put on and read from the disc as they were made.

Most discs are made by sticking ferric oxide to a mylar base. High density discs for the IBM PC/AT and clones use cobalt and a slightly different mylar base giving them a cobbled coating.

When a disc is made a signal is put on to it and taking the level of this to be 100 per cent, the level that can be read back is known as the clipping level. On bulk discs used by software houses for duplication this level is usually around 40 per cent, while for a good quality product the figure is 50 per cent. Disc drives respond to levels of 20 per cent and lower, so there is quite a large safety margin

# Increase YOUR wordpower with KEYWORD

*The essential enhancement for your word processor*

Now you don't have to go hunting backwards and forwards through your thesaurus when you're looking for alternative words, because Keyword from Swift Software is a complete word finder – on disc!

At the touch of a button you can instantly select up to 70 synonyms in any of 1,000 categories – giving you an effective vocabulary of up to 70,000 words.

And it's so easy to use. Simply type in the first few letters of a word and you'll be shown all the entries in the dictionary that start with those letters. Then, using the cursor keys (or mouse if you have one), just pick the word that's nearest to the one you're looking for and you'll be presented with a comprehensive list of synonyms.

*If you ever find yourself stuck for words, Keyword is the answer! Send for your copy today and you'll never be tongue-tied again.*

## WHAT REVIEWERS SAY

"As a word finder for everyday use it is excellent... Next time I am stuck for a word I shall be using Keyword rather than reaching for the thesaurus on the bookshelf."  
— The Micro User

"There is no doubt that this is a useful and powerful piece of software... Give me convenience every time."  
— Electron User

"Keyword will interest anyone who uses a word processor for more than notes to the milkman."  
— New Computer Express

**Tank Attack**  
The unique computerised board game

Tank Attack is a computerised board game for two, three or four players, where each one takes the rôle of a General commanding a country's Tank Corps of one or more armoured divisions.

Your objective is to capture the enemy headquarters, which will require the planned strategic deployment of your forces and regular fire duels between your own and enemy units.

Weather, morale, skill, judgement, planning foresight, careful management of rebuild and repair facilities and luck all play a part in deciding the result of each game.

Tank attack is one of those games you keep coming back to, and at the special offer price of only £19.99 is guaranteed to give you and your friends hours of action-packed excitement.

- Control a full division of tanks and armoured cars
- See all the fighting 'live' on your computer
- Superb board and fully detailed playing pieces
- Real time graphics
- Play as allies or enemies
- Suitable for all ages

**Create your own  
fireworks display with  
Andrew Sage's utility**

**N**OVEMBER the 5th is still a long way off, but with last year's spectacular fireworks displays still fresh in my mind I decided to recreate a special computerised version that I could watch at any time on the Electron.

To achieve the fast moving graphic display the traces of the fireworks are drawn onscreen and are then animated using a quick yet simple palette switching technique. Timing is critical, so if you have a Slogger Turbo you'll have to switch it off as you won't see the full effect of the fireworks.

A number of parameters have to be input each time the program is run, and it is from these that the firework display is constructed. The parameters are:

**Up vel:** The speed at which the fireworks first move up the screen.

**Across vel:** The speed at which the fireworks spread across the screen.

**Length:** The number of sections in each firework trace.

**Gravity:** The rate at which the fireworks are pulled down.

**Up vel. dec:** The amount by which successive fireworks reduce their height.

**No. of rays:** The number of fireworks on each side of the display.

**Colour change:** Whether or not the display changes colour when it is animated.

All these parameters may at first appear quite confusing, so six examples are built in to the program. When the first prompt appears press a function key in the range one to six.

# Memory master

**Lost your memory?  
Find out where it has  
gone with Stephen  
Wade's handy  
programming aid**

**R**EGULAR readers will recall my 10 liner in the October 1989 issue of *Electron User* which displayed how much memory was left. It was this short utility that inspired me to write the Basic System Variables Lister, the program presented here.

The utility is useful to all programmers, as when the assembled code is run a full memory status display is printed on the screen.

When run, the utility reports the position of the start of the memory allocated to Basic programs, the number of bytes used and how many are free for use. The various Basic variables displayed by the program are listed in the table below.

To use the utility simply type in the program, correct any typing errors before saving, and then run it. (It is always wise to save a program which includes assembly language routines before running it, because sometimes fatal errors can creep in which cause your program to be lost).

After the code has been assembled, a message is displayed which requests you to save the object code under the filename of MHelp along with the addresses printed beside it. This is not done automatically so that you can save the file in your chosen library directory, so that it is available instantly at any moment.

The program works by performing three operations to print out each variable. First, the appropriate text string is printed by using a tabled address system, and secondly the X and Y registers are loaded with the contents of the relevant addresses. Finally, a hexadecimal print routine is called in which the variable values are printed out.

Where the values to be printed are calculated by subtracting one address from another, the calculations are performed before the hexadecimal printing routine is called.

Using the utility couldn't be simpler - just type \*MHelp whenever you wish to check up on your memory. The addresses are printed out so that they can easily be read in any mode.

The assembled code is executed in pages &B and &C of the memory map. This means that you will be unable to use any user defined characters or function keys when the routine is in use, but if these facilities are necessary the code can always be relocated to &900 by altering the source code and re-assembling it.

The four zero page addresses used in the program as pointers are restored from the stack as the routine exits, so any important values stored in them are preserved.

Due to the way that the program directly accesses zero page addresses to gain its information, it is unlikely to work in languages other than Basic, because different languages store their memory pointers in different ways.

```

The Basic system variables and their storage address

If you wish to write a routine that performs a similar function in View, for example, the coding is essentially the same and all you need to know are the View variable addresses.

I find this routine most useful when I am programming as when used correctly it reduces the risk of running into the dreaded *No room* error. Any programs that use long variable names require a large amount of variable storage space, so do keep a watchful eye on how much memory is free.

I hope that you find the routine as useful as I have - it can avert disasters, especially when writing lengthy programs.

# Save on batteries!

For your personal stereo, radio or TV

You know how expensive it is to replace your batteries when they run down. Even with rechargeable batteries you still have to wait 14 hours for a full charge.

We have solved the problem with the unique superfast powerful battery and charger kit. This amazing device will completely charge four standard AA size rechargeable batteries in under 2 hours and each battery can be recharged at least 1,000 times. Further, for a limited period we can sell the charger and four rechargeable batteries at the staggeringly low cost of £19.95 (plus £1 p&p).

*It will pay for itself within weeks*

**TO ORDER PLEASE USE THE FORM ON PAGE 45**

# Water sports

**O**UR second 10 Liner this month comes from Mark Davidson of Peterhead. The program prints some text on the screen and, using a bit of machine code jiggery pokery, produces a wavy underwater effect that tends to make you seasick.

The rippling effect is created by rotating each character horizontally within its own character cell. A difficult task to achieve in Basic, it is a relatively simple procedure in machine code using the 6502's logical shift and rotate instructions.

Each byte in the screen memory is shifted one bit to the right and any set bit falling into the carry is placed in bit seven, the leftmost bit position. The code is short enough to be included in any arcade game and will add interest to a title screen or high score table.

# Short, sharp graphics

**T**HIS program, another short graphics display demonstration proving just what your Electron is capable of, comes from Stephen Wade of Stockport, Cheshire.

The graphics display is split into two parts: Triangle plotting and line plotting. The triangle plotting takes the form of drawing a large polygon with ever flattening points, and the line drawing produces a type of three dimensional cone.

The triangle plotting is done using the PLOT 86 command and the line drawing by using PLOT 14. The program switches off keyboard input, so the only way out is by pressing Break or switching off.

As it stands the program runs reasonably fast in normal mode, but will be much more appreciated in Turbo mode.

#### Look what it offers:

- ★ 2" HQM LCD colour screen
- ★ Internal loudspeaker
- ★ Volume control
- ★ Brightness control
- ★ Colour control
- ★ Extendible aerial
- ★ External aerial socket
- ★ Earphone socket
- ★ Automatic tuning
- ★ External power supply socket
- ★ Takes four standard AA size batteries

Because of a breakthrough in technology you can now watch your favourite TV programmes anytime, anywhere – and in full colour with the new pocket-sized Colour TV400 which features a revolutionary high quality matrix LCD display – giving crisp, bright pictures.

Measuring just 5 x 3 x 1 inches, the TV400 sits snugly in the palm of your hand, or you can use the built-in rest to place it on most surfaces – at just the right angle for optimum viewing. The screen itself measures 2 inches diagonally.

When the TV400 was designed, part of the specification was that it should be useable virtually anywhere. As a consequence it has a built-in signal amplifier which can pick up some far away stations your ordinary TV can't! Plus it has automatic tuning, so at the touch of a button the TV400 scans through the band and quickly locks into all receivable broadcasts.

We have tested the pocket TV in trains, on buses, in cars, indoors and outdoors, and in most cases the picture remained sharp and clear. However, reception could vary depending on obstacles in the way of the signal like large buildings and hills.

Whether for yourself, a member of your family or friend, the TV400 makes an excellent present which will give entertainment and pleasure for many years to come.

Due to our purchasing power we can make the TV400 available to you at the exceptionally low price of just £94.95\* – a saving of £20 off the normal price. We have not seen the TV as cheap as this anywhere else – including the High Street stores.

*And remember, you can buy with complete confidence as the TV400 comes with a full one year guarantee for parts and labour (in normal use).*

RRP £114.95

**OUR PRICE £94.95\***

\* Plus £1.50 post and packing

Please note: The TV400 is tuned for UK PAL broadcasts. Therefore we can only accept orders from the UK

**Save £'s on batteries for your TV, radio personal stereo . .**

You know how expensive it is to replace your batteries when they run down. Even with rechargeable batteries and a charger you still have to wait 14 hours for a full charge.

We have solved the problem with the unique superfast powerpoint battery and charger kit.

Lots of - introducing plurals

### Fun Sums Age 4-6 yrs

Includes  
Counting - Keep count of Kicker Kangaroo's scoring  
Number Recognition - Sail the required number of boats into harbour  
Sorting - Put the right coloured shapes into sets  
Addition - An easy introduction to sums and to those + and = symbols - coloured beads give a visual aid  
Patterns - A fun hello to the important concept of sequences  
Tallest - Spot the highest flower an exercise in visual perception

### Sum Takeaway Age 6-7 yrs

Cheshire Cat **SUM-TAKEAWAY** includes  
Addition - Full hello to sums  
Subtraction - Starts with differences and introduces Take Away  
Charts - Ways of recording information A vital concept in the child's future  
Tens & Units - Delightful visual hello to numbers over nine  
Multiply - First step in those times tables and the 'X' sign

### Adder Sums Age 7-8yrs

Cheshire Cat **ADDER SUMS** includes  
Multiplication - Calculate the cost of items shown in the grocer's shop window  
Addition - Correctly total the shopping bill from the grocer's  
Division - Share out the biscuits using the simple technique provided  
Time - Learn to tell the time of day, days of the week and the months of the year  
Tables - Make a start or improve on those important times tables

### Sum Times Age 8-9 yrs

Cheshire Cat **SUM TIMES** includes  
Tally & Bar Charts - An easy introduction to graphs  
Time - A moving clock for digital time  
Tens & Units - Addition & Subtraction of numbers over nine  
Symmetry - Lines of symmetry  
Co-ordinates - Important for reading maps and graphs  
Square Units - Invaluable for calculating areas etc

### Sum Measure Age 9-13 yrs

Cheshire Cat **SUM MEASURE** includes  
Length - Work out the length of a line in centimetres or millimetres  
Area - Find the area of a rectangle using cm<sup>2</sup>  
Volume - Give the volume of a cuboid in cm<sup>3</sup>  
Temperature - Work out the temperature shown on the thermometer  
Mass - Read the correct balance scale  
Capacity - Measure the amount of liquid in the cylinder

# Upgrading to 16 bit?

Whether you're about to buy an Atari ST, an Amiga or a PC, we've got just the magazine for you.

Atari ST User, Amiga Computing and PCA are THE three top magazines dedicated to 16 bit micros. Written in the easy-to-read Database style, each magazine is the ideal companion for the micro it covers.

£1.95

The biggest and fastest growing magazine for users of the Atari ST.

It's packed with all the information you need to make the most of your ST, interviews with top ST programmers to exclusive previews of the latest business and games software.

with subscription only

£1.95

Britain's newest and brightest magazine for Amiga Users.

In each issue are reviews of all the latest software, ranging from games, art packages and business programs, to video titling systems, music creators and languages. Learn about the Amiga's incredible sound and graphics capabilities, and how to write your own games, utilities and business software.

£2.25

The most up-to-date, fact-filled magazine devoted to the IBM PC, Amstrad PC and compatibles

Each month it's packed with facts about the latest software, handy utilities, fast-action games, music programs and much, much more. There are thorough evaluations of all software and hardware, beginner's tutorials and language workshops, plus unbeatable special offers.

## Save

UK only

As a reader of Electron User if you subscribe to any of these magazines using the form below, we'll give you a £5 reduction.

So send off your subscription today. Ensure you get your copies delivered straight to your door - before they appear in the newsagents - and save money too!

## ORDER FORM

Please send me the next 12 issues of

- ☐ Atari ST User £24.95 (9344) ☐ PC £22.00 (5456)  
☐ Amiga Computing £20.95 (9557)

# Caught on the rebound

**Andrew Sage presents an unusual and addictive ball game**

**D**EFLCTOR is a fascinating game that is sure to have you hooked right from the start. A target looking like a small polo mint moves slowly around the screen and a rubber ball also bounces around. What you have to do is to make the ball hit the target by bouncing it off strategically placed deflector shields.

The idea is simple, but the gameplay is maddeningly frustrating – you'll soon be tearing your hair out as the ball bounces uncontrollably around the screen.

You have two controls – the keys < and > – which can be used to place an angled deflector just behind the ball. One deflector points one way and the other in the opposite direction. When the ball bumps into a deflector it bounces off in the appropriate

direction. By careful placement of the deflectors you can make the ball bounce in any direction you wish, and so hit the slowly moving target. Well, that's the theory, but in practice it is quite difficult and requires a lot of experimentation. Be prepared to spend the first few games just familiarising yourself with the controls.

At the start you have the option to change the difficulty level from zero (hardest) to nine (easiest). Start on level nine and master that before attempting to increase the difficulty.

# Put them in the picture

**Paul Hodgskin offers a graphical utility for analysing statistical data**

It is said that a picture is worth 1,000 words, and nowhere is this more true than when analysing complex data. Show anyone long lists of facts and figures and their eyes soon begin to glaze over as they struggle to spot trends and draw conclusions.

Turn those lists of figures into a graphical form – a pie chart, line graph or bar chart – and the statistical data becomes much more meaningful. Patterns and trends become obvious and it is easy to extrapolate results.

Plotter is a powerful graphing program that will enable you to create graphs with

ease. All you need to do is to choose the type you want, then type in the data – everything else is automatically handled by the Electron.

The axes are drawn and labelled – you are prompted for the labels – the scale is put on and the title printed at the top of the screen (another prompt for this information). Then you have the option to dump the graph to the printer.

Unfortunately, the program doesn't contain its own printer dump routine so you'll have to supply your own. Several have been published in *Electron User* over the past few years, the most recent being in the August 1989 issue. You can load this into memory and call it from line 990.

The program is menu driven and you can display the data as a pie chart, 3D pie chart, bar chart, 3D bar chart or line graph. Just press the number key next to the required option – it couldn't be simpler.

```

# Here's how you can get the very best out of your Electron

Within the pages of these three books you'll find ALL the information you need to fully harness the power of your Electron. They cover Basic, machine-code programming and the operating system, and between them they also show how to combine all three to create more powerful and effective programs.

For the give away price of just £7.95 for the three, these books represent exceptional value and are a must for any serious Electron user.

## Electron Advanced User Guide

This detailed guide to the Electron's operating system is packed full of invaluable information. It shows you how to:

- Implement the powerful \*FX/OSBYTE calls
  - Write your own paged roms
  - Program the ULA
  - Make every byte count where program space is tight
  - Use the Electron's exciting capabilities to the full by following the complete circuit diagram
- ...and much, much more.

This essential handbook will help you to exploit the full potential of your Electron. And for just £2.95, saving £6.50 off the recommended price, can you afford not to miss this offer?

## Electron Assembly Language

The Electron Assembly Language reference guide will help you get to grips with machine code in next to no time. Whether you're a beginner or are already fairly proficient, there is something for you in this book.

It has over 200 pages packed with hints, tips and example programs on subjects ranging from basic hex, binary and decimal number theory and logical operators, through addressing modes, stacks and loops, to subroutines, jumps and calls.

Every aspect of machine-code programming is covered in this book in a friendly, readable style, and there's also a comprehensive index. If you want to get more out of your micro, but thought machine code was indecipherable, this is the book for you. *Save £3 off the recommended retail price.*

## Getting started in BBC Basic on the BBC Micro & Electron

This is the ultimate guide available on BBC Basic. Written by a leading expert on the language, it will lead you through each Basic function in a simple, easy-to-follow style.

Whether you are a beginner or more advanced, there are examples of commonly-needed routines and neat tricks you can use to make Basic jump through hoops.

By working through its many examples you will gain a clear insight into structured programming and will quickly acquire the ability to use structured techniques in creating your own programs. *Save £3 off the recommended retail price.*

Only  
**£7.95 for all three**

# MICRO MESSAGES

*If I HAVE got an Electron with a dodgy power lead. When I type in long Basic programs and the lead to the micro wobbles – zap! All my typing is lost.*

*It is a great shame that I cannot use the Forget Me Not article in the April 1989 issue of Electron User. I have tried taping the power lead to the desk and on to the computer, but it doesn't help.*

*Is it possible to make the Electron less dodgy without buying a Plus 1, Plus 3 or any other Plus?*

*At school I like to write educational games, bar charts, alphabetical sorters and many other programs. I find the BBC Micro's and Electron's style of Basic very good.*

*Finally, I notice that your magazine is called electron user, but shouldn't it be called Electron User? – P.W.T. Mash (age 9), Beverly, East Yorkshire.*

● This is a common problem with old and well used Electrons. It is most likely caused by a break in the power lead at either the plug end or the Electron end, usually the latter.

Pres should be able to supply you with a plug and switch which replaces the Electron end of the cable, curing the intermittent fault if that's where it lies.

If it is at the other end then you'll have to get someone to take the power supply apart, cut off the damaged section of wire and resolder the good wires back on. It is a simple enough task, but you need to take care when mains power supplies are involved.

The *electron user* title is taken from the name on the micro – take a look, it has a lowercase e.

## Close encounter of the Thargoid kind

*I HAVE been playing Elite for three years and have now reached Elite status. I have been to all eight galaxies, but as of yet I have never met a Thargoid.*

*Is it possible to encounter Thargoids in the Electron version? I am also considering*

## When your Electron throws a wobbly...

*upgrading my Electron by buying Software Bargains' new interface board. The basic version of this has only one cartridge port. Can this be used to add a disc drive? – M.W. Bone, Guildford, Surrey.*

● Unfortunately, you won't meet any Thargoids in the Electron version of Elite. They were vicious aliens that inhabited hyperspace, ambushing you in between star systems, but they are all now extinct.

The Software Bargains board works with Slogger's disc interface, but we have had reports of some not working with Pres' AP4 interface. The board is simply the cheapest way of expanding the Electron and in the long run it may be wiser to save up for a more robust unit such as Pres' Plus 6 (an improved version of Acorn's Pus 1).

## Electron User for BBC Micro users

*I AM a subscriber to your excellent magazine, but I own a BBC Micro! A few months ago a I received a BBC Micro (issue four) with an Opus Challenger disc drive. So far the free monthly tapes work fine. I did try other magazines, but there are none quite like Electron User.*

*What is the longest program you have published? The longest I have seen is 3A blocks long on tape. Could you tell me what a Winchester is and what it does as I have heard them mentioned many times? – Alex Buckland, Reading, Berkshire.*

● The length of programs that we publish is restricted to a maximum of about 12k – this is a very long program indeed and would take up about three pages of solid listing. How do readers feel about long type-ins?

Are they worth it? Does anyone bother? Let us know what you think.

You won't hear much about Winchester in *Electron User* as the Electron can't use them. It is a special disc drive that has a disc permanently sealed inside it – you can't change it like a floppy disc.

The hard disc mechanics are made to a very high precision and are quite delicate and easily damaged. However, the storage capacity is phenomenal and a medium size disc will hold 40,000,000 bytes – 400 times as much as an ordinary 40 track DFS floppy disc.

## Keeping tabs on soccer results

*MY dad bought our Electron the year it was launched and we have gradually expanded it. We now have an AP1, AP3, View, Viewsheets and a Citizen 120D printer. We have subscribed since the very first issue of Electron User and are very pleased that you now include a tape with the magazine.*

*I play football in a youth league every weekend, but unfortunately our local paper publishes the league table very infrequently. Could you tell me of a program where I can enter my division and which will alter the positions of the teams and update the points and so on when I enter the results?*

*If there is not already a program to do this could you please consider publishing one in a future issue of Electron User? – Paul Mickleburgh, Lowestoft, Suffolk.*

● We don't know of any program written specifically to do this, but if any reader can write one then we will consider publishing it.

## Printing View on a Schneider

*WE have been regular subscribers to your magazine for the past year and have recently taken advantage of the special offer advertised to buy View and Viewsheets, and also a Schneider printer. My husband contacted you recently regarding operation of the printer driver and I now have some other queries.*

*Will the screen dump program from the August 1989 issue of Electron User work on our Schneider? And are there instructions*

## Zsysshelp has its uses

*COULD you please tell me what ZXSYSHELP is for when a disc is formatted on a Plus 3. I think I read somewhere that it should not be deleted, but I have done so to gain more disc space with no apparent ill effects. – J.D. Renaud, Wolverhampton.*

● There is a slight bug in the Plus 3's ADFS that occasionally makes reading and writing to the early part of the floppy disc unreliable. To combat this a long file called ZXSYSHELP is written to the disc after formatting and by occupying this first part of the disc any programs or data files are forced past this section.

You can delete it, though you need to unlock it first, to release more disc space, but don't be surprised if one day you get a disc error when reading or writing to this part of the disc.

TWO WAYS TO ENSURE  
YOU GET

# electron user

EVERY MONTH

1. Complete and mail subscription form on Page 45
2. Hand this form to your newsagent.

Please reserve me a copy of Electron User magazine every month until further notice.

- ☐ I will collect  
☐ I would like it delivered to my home.

Name \_\_\_\_\_

Address \_\_\_\_\_

*Note to newsagent: Electron User should be obtainable from your local wholesaler, or contact Circulation Manager on 0424 430422*

## MODE 7 Mk2 UNIT

IMPROVEMENTS ALL ROUND:

CHEAPER AND MORE COMPACT THAN THE ORIGINAL ADAPTOR  
FASTER AND LESS MEMORY USE THAN THE SIMULATOR

Fits inside the Electron above the ULA – beside the Master RAM Board.  
Uses the same display chip as the BBC – for 'rounded' characters.  
Scanned by the ULA in Mode 4 – for fast screen updating and scrolling.  
Includes Prestel terminal software – just add modem and RS432 adaptor.  
Compatible with screen poking software, e.g. Wordwise, Teletext HIMEM at 87C00 with Master Ram board.

(ROM expansion required to hold the Mode 7 ROM)

Price £49 – available as a kit (board, ROM, instructions – you buy other parts separately) £25

The unit is easily soldered in but a fitting service is available – £10  
(Telephone before sending your Electron)

## RS 423 CARTRIDGE

Uses software in Plus1 ROM, has same socket as BBC

Includes socket for 16K PROM/32k RAM

Price uncased £29.95 + £5 for case + £20 for 32k RAM

## ROMPLUS-144

Sideways Rom Cartridge with Printer Buffer and Filling System

Fits into PLUS 1/Rombox Plus slot – holds 7 Roms plus 32k Ram  
Romplus-144 costs just £39 + £20 for the 32k Ram

## THE MODE 7 SIMULATOR ROM

Gives FULL Mode 7 display facilities simulated in Mode 2

Includes Prestel terminal software – just add modem and RS423 adaptor

Compatible with screen poking software, e.g. Wordwise, Teletext

HIMEM at 87C00 with Master Ram board

Price £25 – includes disc based screen editor/carousel software on 3.5" ADFS or Tape (for DFS transfer) – editor requires MRB

All prices inclusive of post, etc. Please allow 28 days delivery

➤ which tell us how to use the dump, as although we have copies of screen dumps from October 1988 and January 1989, neither explain fully how to use them.

Can you tell me if the Advanced User Guide would give us more information on the use of our Electron now that we can operate View, Viewsheets and a printer. — **Aleen Medcalf, Buerton, Crewe.**

● We haven't used a Schneider printer, but if it is Epson compatible then it should work. Machine code screen dumps are run with a CALL command, and in the case of the dump in the August 1989 issue you must CALL &C00. Basic dumps are usually executed with a simple procedure call.

The Advanced User Guide is an invaluable guide and source of technical data for programmers. It is heavy going in parts, but well written. It isn't much use unless you intend getting your hands dirty with machine code programming.

## Home finance improvements

LIKE Steven Coultas (Micro Messages November 1989) I was unable to get a print-out of Home Finance Manager after making the changes suggested by A.R. Dunks in the September 1989 issue.

After studying the listing for some time, I noticed that in line 680 the number 24 had no brackets around it, but all the other numbers had. I inserted the missing brackets and hey presto, it worked. Line 680 should read:

```
680 PRINT date$(i)TAB(6)detail$(i)TAB(24)dc(i)TAB(32)balance(i)
```

— **E.S. Brotherhood, Swinton, Manchester.**

● Just to recap for anyone who is confused — the original program is OK, but we printed an error in A.R. Dunks' improvements in the September 1989 issue of Micro Messages. The correct line is that printed above.

## Put a pen to disc petition

I AM starting a campaign to persuade software houses to release more software for the Electron on 3.5in disc. I am starting with Superior Software and welcome any support.

Please write to Superior Software asking it to change the format it uses when releasing hits. Electron versions are nearly always on tape which are slow and boring to load.

If anyone can get a petition going and send it to me it would be great. — **Alex Buckland, 22, Fawcett Crescent, Woodley, Reading, Berkshire.**

## Basic way to use a driver

THANK you for the printer driver program in the December 1989 issue of Electron User, I am sure that it will be useful when I load it.

# Top conversions wanted

IN the December issue of Electron User Simon Tarry asked for more conversions of top games like Robocop and Dragon Ninja and I would like to add my support to his plea. I would also like to see Out Run and Ghostbusters II. Are there any plans to convert these games?

Budget priced games seem to be the only ones you can buy in the shops. Some are very good, like Yie-Yar Kung Foo and Joe Blade, but some are poor and shouldn't even be on sale.

Does the Slogger Master Ram Board give you BBC Micro compatibility? And finally, can anyone help me with level two of The Last Ninja? — **Adam Chapman, Scotland.**

I AM writing in support of Simon Tarry's letter asking for new and better games for the Electron. I also think that arcade games like R-Type, Robocop and Dragon

Ninja should be converted. Surely it would not be too difficult to alter the program or make a smaller, less detailed version?

Like Simon, I am also asking for others to write in support of conversions to US Gold (Units 2/3, Holford Way, Holford, Birmingham) and Ocean (6 Central Street, Manchester). The former may convert Strider or Forgotten Worlds, while the latter may convert Robocop, New Zealand Story and Dragon Ninja. — **James Glodkowski, Radcliffe-on-Trent, Nottinghamshire.**

● Superior Software might be producing an Electron version of Robocop, but there is no news about the other games listed.

The Master Ram Board does not increase or decrease the BBC compatibility, it simply makes the Electron faster and provides more memory in the form of shadow ram.

Can Ghostbusters II be converted to the Electron?

The problem is that I get the response Not with cassette, indicating that I need a disc drive. I have also tried the command PR to load the new printer driver, but the screen just goes blank. I don't have a disc drive, so can you help with this problem?

My Amstrad printer uses various escape codes for its functions. Is there any way I can access the printer direct without using a program?

Thanks for a great magazine, my new tape subscription is a boon. — **M.A. Budd, Staines, Middlesex.**

● It sounds like you are not using the printer driver correctly. It is a Basic program that needs to be run in Basic — you don't load it into View. Run the program to create your driver, giving the resultant machine code file a meaningful name like DRIVER.

Now go into View and load the printer driver with the command PRINTER DRIVER (or PRINTER FRED if you called the machine code driver file FRED).

You cannot type LOAD to load it, and with a cassette-based system this will give you the error message Not with cassette. You

don't need a disc drive. You can directly access the printer by pressing Control+B, this makes the printer echo anything you type into the micro. Control+C switches off the printer.

## Cheats are sadly lacking

I AM a seven-year-old boy who loves playing computer games. My favourites are Imogen, Palace of Magic, Project Thesius, Ravenskull, Craze Rider, Frak, Commando, Spellbinder and Codename: Droid.

I am issuing a plea to readers to send in cheats and tips for all these games (they are all compilation versions — Sam 2, 3, 4 and 5 and Five Star Games 3), or any other games as I have got all the Sam volumes.

I cannot get past Herbert Droid on Codename: Droid, the parrot on Imogen and the guard with the flamethrower in Project Thesius.

I find it fun trying all your programs and thoroughly enjoy your magazine. — **John Buchanan, Gillingham, Kent.**

**BINDERS**

Using a system of strengthened steel rods these handsome binders will hold 12 issues of your favourite magazine securely in place. Why rummage through cupboards and book cases for dog-eared back issues when you can keep them safely together in one place?

**ONLY £3.95****1990 DTP YEARBOOK**

The Desktop Publishing Yearbook 1990 is an invaluable buyer's guide containing the most detailed survey available of hardware, software and services in the electronic publishing field. And there are clearly-written "how-to" articles for both the newcomer to Desktop Publishing and the experienced user.

Articles cover software, laser and other electronic printers, matrix printers, digitisers and scanners, training and forms creation, bureau services, word processors, and many other key topics including the emerging desktop presentations technology.

Whether you're a beginner or professional and would like to find out more about the exciting possibilities of DTP, then this book has all the information you need. Send for your copy today

**Save over £5 on RRP.****Our price including UK postage: £14.95**

Write your own arcade smashes using the

**ARCADE GAME  
Creator**

Taken from the pages of *Electron User*, *Arcade Game Creator* lets you into the secrets of writing fast-action arcade games, and provides you with a number of utilities to make design and programming easier.

Among the programs are:

- A mode 5 sprite editor that lets you design your own multi-coloured characters
- A selection of fast print routines that will move sprites both in front or behind other objects on the screen.
- Map generators that will squeeze a Mode 5 screen into 8 bytes!
- Scrolling maps.
- Score update and printing routines, ... and much, much more.

If you are an aspiring games programmer, this is an offer you simply cannot afford to miss!

**Tape + manual.....£9.95****TANK ATTACK**

Tank Attack is a computerised board game for two, three or four players, where each one takes the role of a General commanding a country's Tank Corps of one or more armoured divisions.

Your objective is to capture the enemy headquarters, which will require the planned strategic deployment of your forces and regular fire duels between your own and enemy units.

Weather, morale, skill, judgement, planning foresight, careful management of rebuild and repair facilities and luck all play a part in deciding the result of each game.

Tank attack is one of those games you keep coming back to, and at the special offer price of only £19.99 is guaranteed to give you and your friends hours of action-packed excitement.

- Control a full division of tanks and armoured cars
- See all the fighting 'live' on your computer
- Superb board and fully detailed playing pieces
- Real time graphics.
- Play as allies or enemies
- Suitable for all ages

**RRP £12.99****OUR PRICE****£9.99****DUST COVERS**

Keep your Electron free from dirt and dust with these smart dust covers. Made from rugged PVC, bound with strong cotton and sporting the distinctive *Electron User* logo, these are the perfect way to protect your micro.

**ONLY £4.95****Heres how to get  
the best out of  
your Electron**

Within the pages of these three books you'll find ALL the information you need to fully harness the power of your Electron. They cover Basic, machine-code programming and the operating system, and between them they also show how to combine all three to create more powerful and effective programs.

**Electron Advanced User Guide**

This detailed guide to the Electron's operating system is packed full of invaluable information.

This essential handbook will help you to exploit the full potential of your Electron.

**Electron Assembly Language**

# SIMPLY SUPERIOR

A selection of four  
of the best games  
ever released by  
Superior Software

## Repton Infinity

Repton Infinity is the best game yet in the Repton series. It features four games, each with numerous mind-bending puzzles, and also comes with a complete game-designing system.

With it you get a Sprite and Map Editor plus an easy-to-use programming language that lets you create your own unique games. They compile to stand-alone games you can load up and run on their own.

## Elite

This has to be THE classic arcade adventure of all time.

Can you work your way up from Harmless to Elite by flying from planet to planet, selecting goods at the best prices and trading them for a profit on other planets?

Will you survive the hectic space flights and docking procedures, all shown in superb 3D?

If you don't already own a copy of Elite, this is one game you simply MUST have in your collection!

## Barbarian

Barbarian is a fierce game of combat which will tax your skill and reflexes to the limit.

It is a game for one or two players in which you have to hack and slay your way through dozens of punishing screens on your way to saving the beautiful Mariana, abducted by Drax.

But be careful, you'll need all your wits about you to have any chance of success against your dastardly opponent.

## The Last Ninja

The secrets of the Ninjitsu way had been jealously guarded for centuries, only once every decade were the scrolls seen at the ritual of the White Ninja. None coveted these secrets more than the evil Shogun. Seizing the opportunity of the ritual he sprang a fiendish trap that destroyed the brotherhood, except for one... You. The Last Ninja.

Your sworn oath is to recover the scrolls, you travel to the mystical lands of the Shogun. Already his guards are mastering the ways of the Ninjitsu. To reach the Shogun's Palace you must use all your weapon craft and fighting skills as you travel through dangerous wastelands and magnificent gardens, then descend into the direst dungeons before the final confrontation.

# THREE GREAT NEW TITLES FROM SUPERIOR SOFTWARE

A Thug in the Cellar

Mugged on the Street

## LAST NINJA 2 - Back with a Vengeance!

Born in a time of peace, lived in a time of war; the shadow warrior returns. Leaping the abyss of time he comes to fulfil his destiny!

DATELINE: 1990 THE PLACE: Downtown New York  
THE QUEST: To destroy the eternal evil.....Kunitoki!

Lots more fiendish adversaries, more colourful screens with superb graphics, a score-line, a timer... and lots and lots more exciting Ninja action. Are you ready for the thrills and skills of the Ninja in crime-filled Manhattan? Can you survive the six action-packed levels?

You start in the notorious CENTRAL PARK, with thugs, police and bees to get past, and shuriken stars and hamburgers to collect. Now to THE STREET, littered with down-and-outs and meths bottles. Take care in THE SEWERS to avoid the darkness and the crocodile. On to the forbidding opium factory in THE CELLAR and then to THE OFFICE and a secret computer code. Finally to KUNITOKI CASTLE with its immortal adversaries and the trickiest puzzle of all!

## PLAY IT AGAIN SAM 12

### A New Action-Packed Four-Game Compilation

#### THE LAST NINJA

The state of the martial arts...fighting with fists, swords, numchukas and shurikens, through six puzzling levels. The top BBC/Electron game of 1989. *'Ninja is fast, furious and totally addictive'...*Micro User

#### SKIRMISH

A brilliant, full-feature version of the classic joust game, with beautifully animated sprites. 1 and 2 player options. *'I can recommend Skirmish wholeheartedly. It is one of the most playable games I have ever seen'...*Micro User

#### BY FAIR MEANS OR FOUL

A realistic and entertaining boxing simulation. You can even cheat...if the ref's not looking! Have you the skills and cunning to become World Champion? Keyboard or joystick controls. *'Excellent boxing game'...*Micro User

#### BLAGGER

A new, much-improved version of the classic Alligata Software game, with twenty tricky, but highly amusing levels. *'The game is a winner... very enjoyable, sure to give many hours of entertainment'...*Electron User

The Last Ninja

Skirmish

## RICOCHET

Level 2 - Techlev

Level 3 - Derelict

## RICOCHET

### A Massive Arcade Adventure with Brilliant Graphics

RICOCHET has an amazing 330 different action-packed screens arranged over five levels. You get five games in one, since each level has its own distinctive theme, with superb graphics and unusual puzzles to solve.

You control SPRAT, the Small Partially Robotic Alien Time-traveller, in his quest to collect the five hour-glasses from the five worlds of RICOCHET. SPRAT can roll left and right, and can roll up and down ladders and ropes, but, his unique ability is that he can jump to different heights and in different directions. You have to control this fast-moving alien as he ricochets through the levels and solves the many clever puzzles.

You start in the FORTRESS world, with its alchemists and ghosts, and move on to TECHLEV with its high-tec graphics, and disc drives and tax demands. In DERELICT you explore a world that has fallen apart. THE UFO is a futuristic world with robots and ID machines. And finally to the ANCIENT world of Greece, to try and outwit Atlas and Hermes.

BBC Micro Cassette.....\$9.95 each BBC Micro 5 1/4" Disc.....\$11.95 each

(Compatible with the BBC B, B+ and Master 128 computers.)

BBC Master Compact 3 1/2" Disc.....\$14.95 each Electron Cassette.....\$9.95 each

(The screen pictures show the BBC Micro versions of the games.)
